

AVIATION SURVIVAL & WET DRILLS

TAG Ground Courses

This is a combined course to meet the EASA requirements for Aviation Survival Training.

The Aviation Survival course ensures that students have the training they need to prepare themselves for any survival scenario. The course covers both practical and theoretical training elements: the basics of survival in Water, Deserts, Jungle or Polar Conditions. The Wet Drills course covers all the skills required to ensure adequate preparation for ditching in water. It includes a stimulating practical session, where students are given simulated real life situations that may be encountered in an emergency.

COURSE DURATION 0.5 Day

SYLLABUS
